

AWARENESS MESSENGER DRONE

ABSTRACT

Drones are doing a great job in sanitizing areas which are in need. But another big issue is that people in their colonies hang out and the police having to alert them every time colony by colony which is a difficult task for them. My idea is to alert the people with the help of a drone.

In addition to street surveillance, drones can also be used to broadcast messages and information about lockdown measures, especially an in rural area that lacks open communication channels for health information. Awareness Messenger Drone is equipped with a loudspeaker to make public announcements to keep people indoors, take necessary precautions, make social-distancing and wear a mask if stepping outside from home.
